INTRODUCTION

"Ghar ka Vaidya" is a smart, user-friendly web application designed to digitize, preserve, and provide easy access to traditional Indian home remedies (*'Dadi-Nani ke nuskhe'*) for everyday health care and minor ailments.

- Provides easy access to trusted traditional home remedies (Dadi-Nani ke nuskhe).
- Features a modern Dark Mode interface for comfortable viewing.
- Includes Voice Search and Text-to-Speech (Audio Readout) using Web Speech API.
- Offers an Allergy Safety Filter to keep users safe from harmful ingredients.
- Aims to reduce reliance on chemical medicines for minor health issues by promoting natural, kitchen-based treatments.
- Features a 'Night Care' tool that provides instant late-night remedies based only on ingredients currently available at home.

OBJECTIVES

- To provide a centralized digital platform for traditional Indian home remedies.
- To simplify finding solutions for minor health issues using text and Voice Search.
- To display remedy ingredients, symptoms, and preparation steps clearly.
- To ensure user safety by hiding harmful ingredients through an Allergy Safety Filter.
- To offer quick late-night emergency solutions based on available kitchen items.
- To allow users to share and preserve their own family remedies securely.

PROPOSED SYSTEM

The proposed system delivers a reliable and interactive web platform designed to digitize and manage traditional health remedies efficiently.

Core Functionalities

- Voice Search and Audio Readout integration.
- Bimari Wizard and Night Care utility sections.
- Custom Allergy Safety Filter for user protection.
- Form submission for community-driven remedies.
- Built-in Dark Mode interface.

User Advantages

- Easy access to verified natural healthcare solutions.
- Simplified remedy discovery without complex navigation.
- Better user experience through interactive voice assistance.

FLOWCHART

SYSTEM ARCHITECTURE

Ghar ka Vaidya Workflow

Search Remedy Flow

- **Multi-Modal Input:** Symptom, voice, allergy filters.
- **Fast Lookup:** Instant LocalStorage data filtering.
- **Accessible Output:** Visual cards with audio playback.

Add Remedy & Moderation

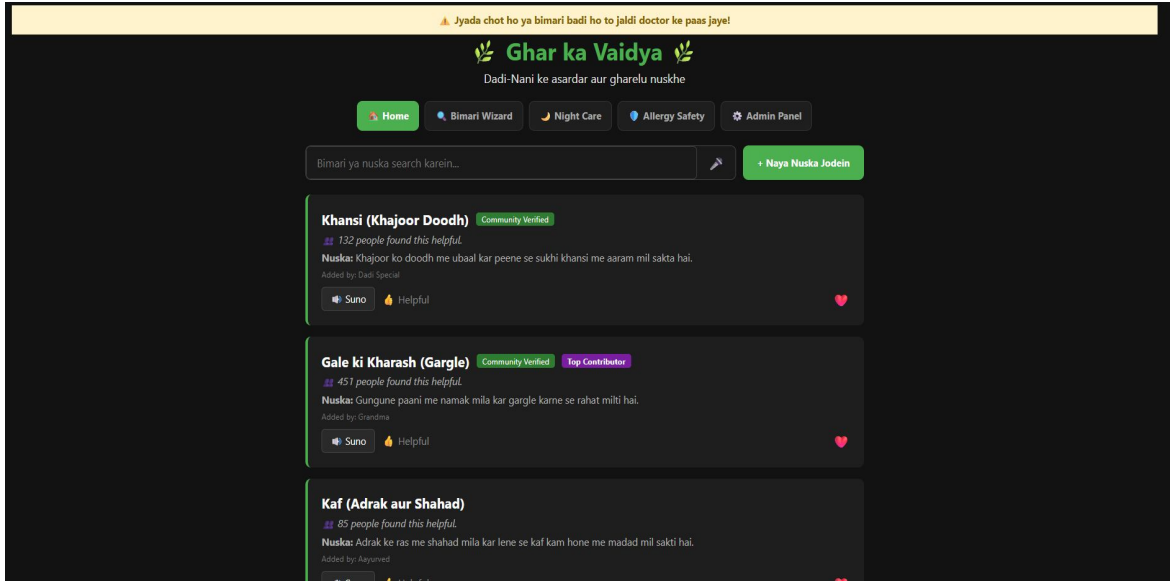

- **User Submission:** Structured new remedy form.
- **Staging Queue:** Hold entries inside pending list.
- **Admin Gate:** Approve to live page or delete.

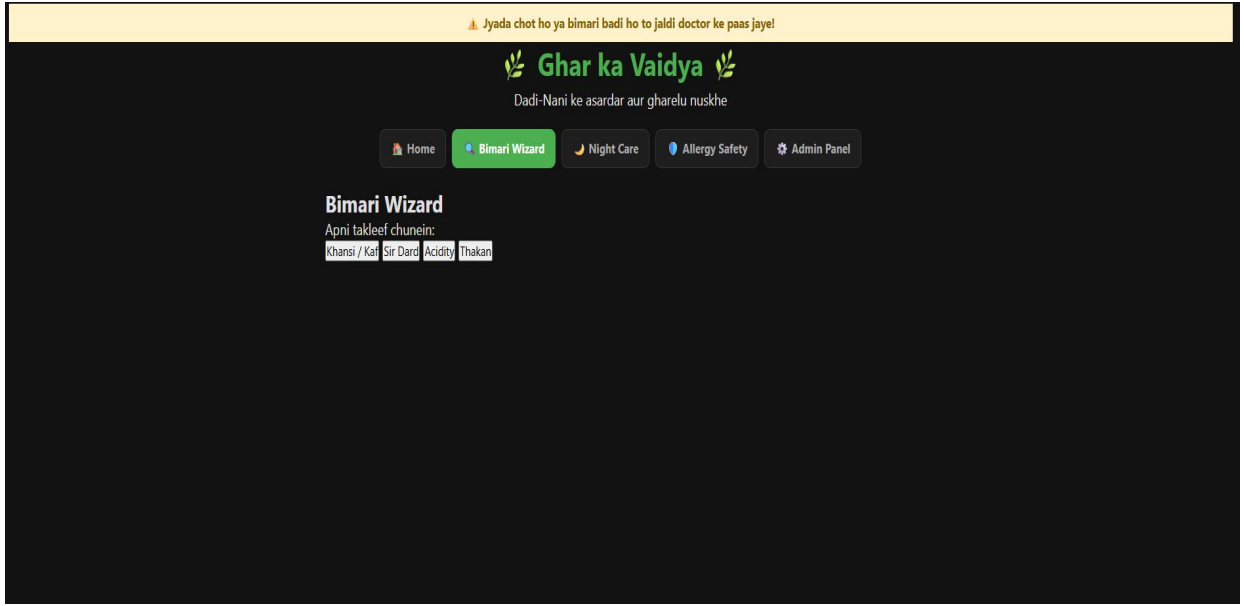

SCREEN DESIGN

The website contains the following user interface screens:

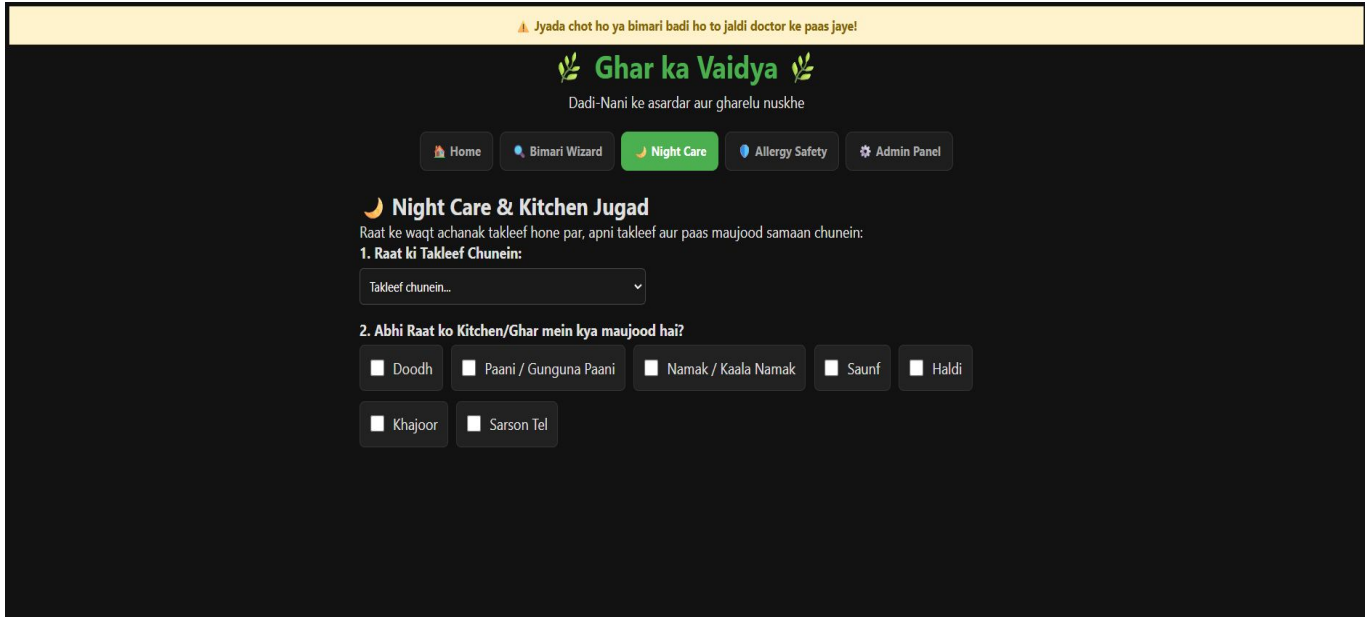

Home Page: Displays the main search bar, voice microphone access, and verified home remedy cards.

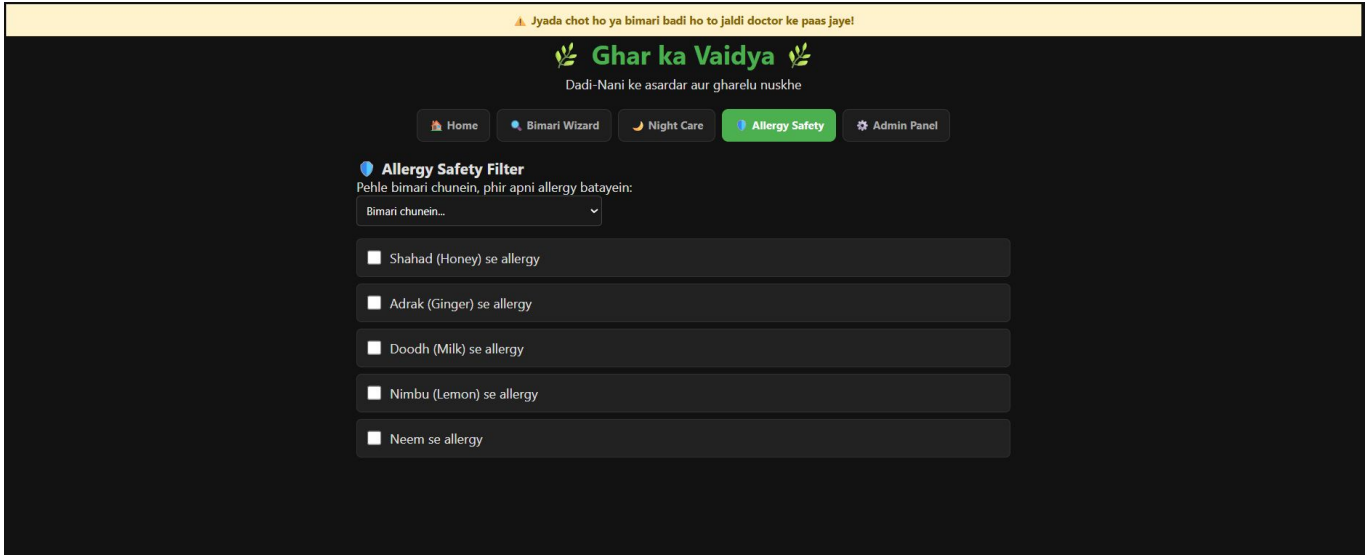

Bimari Wizard: Provides quick-access buttons for common health problems to filter remedies instantly.

Night Care & Kitchen Jugad: Suggests instant emergency solutions based on available late-night kitchen items.

Allergy Safety Filter: Allows users to select allergens and automatically hides unsafe remedy cards.

Admin Panel: Displays pending user-submitted family remedies for review and final approval.

TECHNOLOGIES USED

- **HTML:** Structures the website pages, remedy cards, and submission forms.
- **CSS:** Designs the layout, dark mode theme, styling, and responsive interface.
- **JavaScript:** Adds interactive features such as symptom filtering, tab navigation, and search logic.
- **Web Speech API:** Provides the speech recognition for Voice Search and text-to-speech for Audio Readouts.
- **LocalStorage API:** Stores user-submitted pending remedies directly in the browser without needing a backend database.
- **Visual Studio Code:** Used to write and edit the project code.

IMPLEMENTATION

The project is implemented using modern front-end web technologies and browser APIs.

- **Front-End Development:** Created the website pages and dark mode layout using HTML, CSS, and JavaScript.
- **Navigation:** Connected the different website sections (Bimari Wizard, Night Care, etc.) through tab navigation.
- **Remedy Display:** Presented home remedy names, symptoms, ingredients, and preparation solutions clearly.
- **Remedy Submission:** Created a form to collect user-submitted family remedies and their details.
- **Data Storage Integration:** Used browser LocalStorage for processing and storing submitted remedy data for the admin panel.
- **Interactive Features:** Added the Voice Search, Audio Readout (Suno), and Allergy Safety Filter interfaces.

Description: This snippet integrates the Web Speech API to enable voice-guided search functionality. It configures the recognition engine to accept Hindi input ('hi-IN'), listens via the microphone button, and converts spoken audio into searchable text queries for instant remedy filtering.

```
if ('webkitSpeechRecognition' in window || 'SpeechRecognition' in window) {
    const SpeechRecognition = window.SpeechRecognition || window.webkitSpeechRecognition;
    const recognition = new SpeechRecognition();
    recognition.lang = 'hi-IN';

    micBtn.addEventListener('click', () => {
        micBtn.style.color = '#ff5252';
        recognition.start();
    });

    recognition.onresult = (event) => {
        const rawSpeechText = event.results[0][0].transcript;
        const processedText = convertToSearchable(rawSpeechText);
```

Description: This JavaScript function (`speakNuska`) implements the Text-to-Speech feature of the application. It utilizes the browser's `SpeechSynthesis` API to read out the remedy instructions aloud. It smartly filters out visual emojis from the text, automatically selects a suitable Indian voice ('hi-IN' or 'en-IN'), and adjusts the speech rate for a comfortable listening experience.

```
function speakNuska(text) {
    if ('speechSynthesis' in window) {
        window.speechSynthesis.cancel();
        const cleanText = text.replace(/👥|❤️|🔊|👍/g, '');
        const utterance = new SpeechSynthesisUtterance(cleanText);

        const voices = window.speechSynthesis.getVoices();
        const indianVoice = voices.find(v => v.lang.includes('hi-IN') || v.lang.includes('en-IN'));
        if (indianVoice) {
            utterance.voice = indianVoice;
        }

        utterance.lang = 'hi-IN';
        utterance.rate = 0.9;
        utterance.pitch = 1.0;
        window.speechSynthesis.speak(utterance);
    } else {
        alert("Aapka browser voice support nahi karta!");
    }

}
```

RESPONSIVENESS AND TESTING

Responsiveness

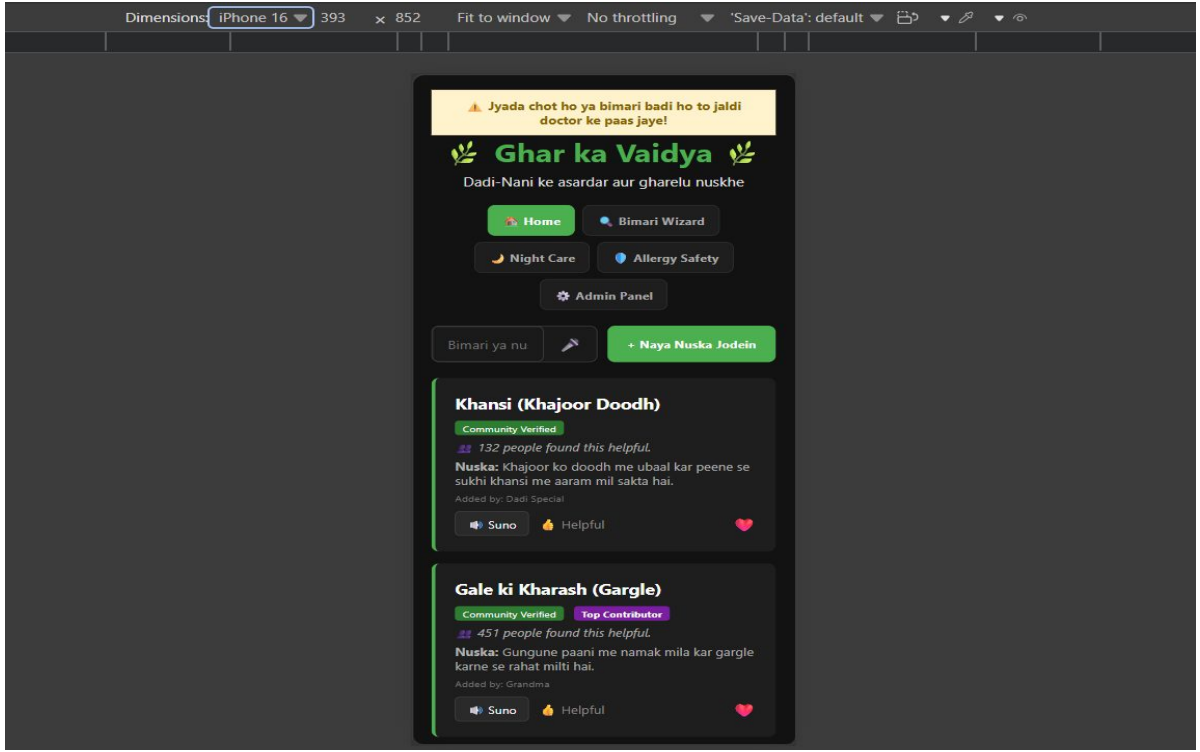

- Designed the website for desktop, tablet, and mobile screens.
- Used CSS styling and responsive layouts to improve usability.
- Checked the appearance of navigation tabs, add remedy forms, and remedy cards on different screen sizes.

Testing

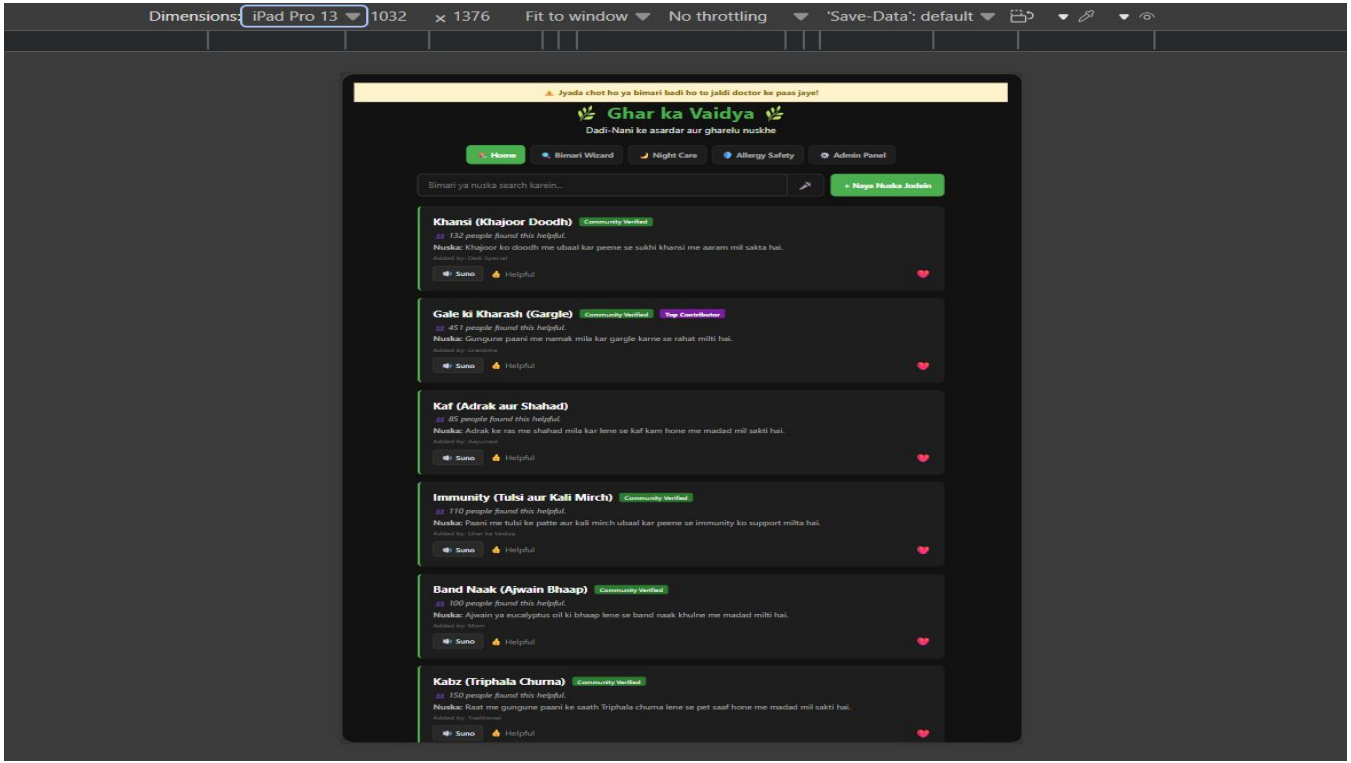

- Checked navigation tabs and page loading speed.
- Tested the 'Add Remedy' form fields and validation.
- Checked LocalStorage data saving and retrieval for pending user remedies.
- Tested Voice Search API, Audio Readout feature, and Dark Mode theme switching.
- Checked the Allergy Safety Filter accuracy and mobile layout.

Result: All interactive features, APIs, and responsive layouts performed successfully across tested devices.

DEPLOYMENT

1.Keep all project files (HTML, CSS, JS) in a single folder.

2.Open the project folder in Visual Studio Code.

3.Launch the index.html file using the Live Server extension or open it directly in Google Chrome.

4.Allow microphone permissions in the browser to enable the Web Speech API.

Future Deployment: Host the website on a public platform like GitHub Pages or Vercel so users can access the remedies from any location.

DEMO

- Homepage and Bimari Wizard navigation.
- Voice Search and Audio Readout functionalities.
- Allergy Safety Filter toggling.
- Remedy submission form and Admin approval via LocalStorage.
- Theme switching (Dark/Light mode) interface.

FUTURE ENHANCEMENTS

- Online hosting with a secure cloud database to replace LocalStorage for global access.
- Advanced Admin dashboard for managing user-submitted remedies and expert verifications.
- Expanded Audio Readout and Voice Search with multi-language support (Hindi, Gujarati, English).
- Automatic email notifications to users when their submitted family remedy gets approved.
- Advanced remedy search, filtering (by age or body part), and seasonal health notification features.
- QR-code-based sharing feature for quickly sending remedies to friends and family over WhatsApp.
- Enhanced security and user profile data protection for saved bookmarks.
- System reports and user feedback analytics to track the most popular seasonal remedies.
